Make the wait easier, not the shop pricier.

THE SHOPPER TRUTH

Long billing queues can exhaust older and pregnant shoppers with nowhere to rest.

Test comfort before claiming commercial upside.

A trolley-linked resting-seat concept—not a proven ROI claim.

Source: Group 7 HCD deck, pp. 16, 23, 26. Commercial framing is a proposal.

Pause Point

Source concept render / not final product

A place to rest is a real shopper concern.

~75%

flagged no seating / resting as a serious issue.

Exploratory signal—not a DMart-wide finding.

WHAT THE SOURCE ACTUALLY SAYS

Around 50 survey responses, gathered through college, relatives and family. Research covered multiple retail chains.

[NEEDED] BEFORE CLAIMING BUSINESS IMPACT

DMart-specific incidence and any lost baskets, visits or repeat shopping.

Source: Group 7 HCD deck, pp. 9–10, 16. Percent and sample size are approximate as reported.

Put a short rest where fatigue builds.

1

Shop

Source journey notes fatigue around an hour in.

2

Recheck

One last grocery check adds to time on feet.

3

Queue

A short pause is needed in a tight billing space.

The opportunity: let the resting point travel with the shopper.

Source: Group 7 HCD deck, pp. 14–16. Journey observations are qualitative, not a timed DMart study.

The brief narrowed from store friction to rest.

1

Explore shopper friction

Seating, loose grains, trolley handling and navigation.

2

Focus on customer evidence

Staff and retailer primary data could not be obtained.

3

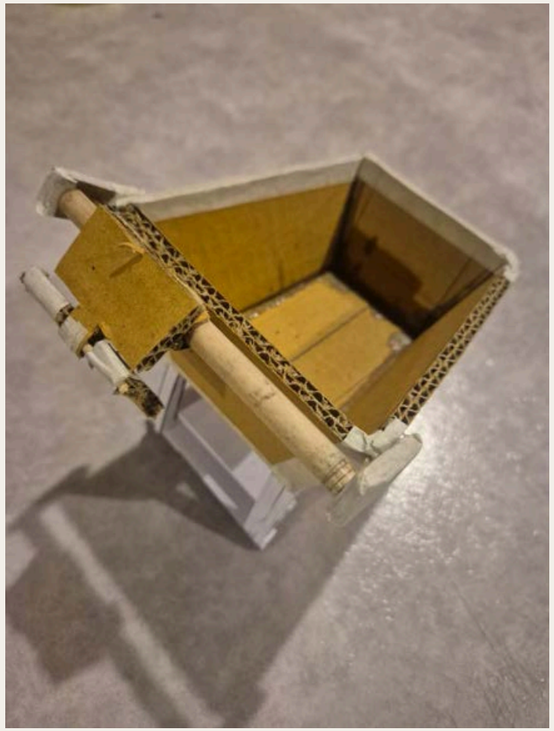

Explore two seating mechanisms

Filter: independent use, body support, clear flow and daily durability.

[NEEDED] Documented comparison, selection scoring and why the final mechanism won.

Source: Group 7 HCD deck, pp. 4, 8, 18–22. Source shows two mechanism ideas, not a scored winner.

Mock-ups exposed a stability risk to solve.

First mini mock-up / source photo

WHAT WAS BUILT

Mini mock-up → Blender models → mechanism proofs

Seat load can move the cart.

The source proposes stopping / locking the wheels to address that risk. This is not a verified safety result.

[NEEDED] USER TESTING AND SAFETY PROOF

Test method, shopper results, load rating and brake verification.

Source: Group 7 HCD deck, pp. 20–23, 26–27. Shopper validation results are not documented.

Pause Point brings a resting seat to the trolley.

A foldable trolley-linked seat concept for shoppers who need a short pause.

Source render / folded seat concept

PROPOSED USE / TO VALIDATE

1. **Stop and secure the trolley**
2. **Unfold the seat and rest**
3. **Fold away and continue**

[NEEDED] Operating sequence and safety sign-off.

Brake and stability checks are prerequisites—not certified capabilities.

Source: Group 7 HCD deck, pp. 18, 23–26. Operating sequence is a proposed interpretation for validation.

Five intended functions serve practical value.

1 / FOLDABLE SEAT + 2 / BODY-SUPPORT INTENT

Independent rest

Intended benefit: a less tiring wait for shoppers.

3 / COMPACT FOLD-AWAY FORM + 4 / PROPOSED WHEEL BRAKE

Flow and stability

Intended benefit: rest without blocking the shop.

5 / FIRM, WIPE-CLEAN SURFACE

Routine upkeep

Intended benefit: simpler everyday cleaning.

[NEEDED] Validate comfort, clearance, stability and durability. Benefits are intended—not tested outcomes.

Source: Group 7 HCD deck, pp. 18, 23, 26.

Design for a pause that feels simple and safe.

1

Notice

A visible resting option.
Bags stay nearby.

PRINCIPLE / EASY TO FIND

2

Rest

Independent use.
Rounded, firm surface.
Body-support intent.

PRINCIPLE / EASY TO USE

3

Resume

Simple fold-away.
Keep the aisle and
queue clear.

PRINCIPLE / EASY TO CLEAR

[NEEDED] On-trolley instructions, accessibility checks and safety validation before shopper use.

Source: Group 7 HCD deck, pp. 15, 18, 23–26. Physical experience, not digital screens; design goals, not proof.

Measure comfort first; earn the ROI case.

Comfort + use

Rest uptake, comfort feedback and incidents.

Baseline → target: [NEEDED]

How: observation + shopper feedback.

Shopping behavior

Footfall, basket size and repeat rate.

Baselines → targets: [NEEDED]

How: visit counts + transaction data.

Pilot economics

Cost, incremental contribution and ROI.

ROI baseline → target: [NEEDED]

How: cost and contribution tracking.

Proposed timing: pre-pilot baseline, then pilot / control comparison.

[NEEDED] Owners, metric definitions, repeat-visit tracking, attribution method and review dates.

Proposed framework for approval—not source results. The attached HCD deck supplies no commercial KPI evidence.

Back a gated pilot—not a rollout promise.

The ask: sponsor a safety-cleared pilot plan before approving adoption.

1

Validate

Brake, load, stability and aisle-fit checks.

Safety sign-off: [NEEDED]

2

Pilot

Stores, trolleys and owner. Timeline and investment.

Scope + budget: [NEEDED]

3

Decide

Comfort / safety threshold. Business targets and review.

Go / no-go criteria: [NEEDED]

Expected outcome: evidence for a go / no-go decision.

Quantified commercial uplift: [NEEDED]. Protect everyday-value positioning; do not pre-sell ROI.

Proposed decision gates, not source commitments. Risks grounded in Group 7 HCD deck, pp. 26–27.
